## 1. Device Overview

### 1.1 Features

- Bluetooth specification V5.0 compliant
- BR 1Mbps, EDR 3Mbps, LE 1Mbps data rate
- LE profiles supported: GATT, HID over GATT (HOGP), Beacon
- Classic Bluetooth profiles supported: SPP, A2DP, HFP 1.6 with WBS, HID, PBAP, AVRCP, HSP, OBEX
- WeChat AirSync via SPP or BLE over GATT
- Apple Homekit, iPod Accessory Protocol (iAP2), Apple Notification Center Service (ANCS), Apple Media Service (AMS)
- Multi-connections: 6 SPP and 2 GATT concurrent connects
- UART or OTA firmware upgrade
- Serial port command for applications

### 1.2 Applications

- Bluetooth SPP or BLE to RS232 (RS483) serial data conversion
- Bluetooth wireless data transmission
- Medical and industrial telemetry
- Portable printers
- Barcode scanning devices
- Mobile POS devices
- Smart appliances
- Industrial automation
- Custom Bluetooth audio devices

### 1.3 Descriptions

The Module BB2706-32 has a notable merit that its firmware supports concurrent Bluetooth SPP and GATT connections. It establishes a Bluetooth bidirectional communication channel which is between the application MCU and the mobile phone through the UART interface. The application MCU can send a corresponding command to enable the Bluetooth module and to set it into different modes, then to send and receive communication data at the SPP or GATT level. The MCU can also read the mode status of the module through serial commands.

This module is designed with Cypress® CYW20706 dual mode Bluetooth 5.0 SoC. CYW20706 features 96 MHz Cortex M3 core, excellent receiving sensitivity down to -96 dBm (BLE GFSK), integrated PA to support Class 1 Tx power up to 12 dBm. These two RF parameters contribute to its best in class link budget to enable long Bluetooth communication distance around 100 meters or even farther. This module has a fine tuned inverted-F PCB antenna. It provides excellent efficiency while keeps small size. This module can be easily integrated in a product board.

As a dual mode Bluetooth module, it can realize both GATT and SPP connections concurrently, which provide the best interoperability for various iOS and Android mobile devices. It supports both BR (2 Mbps) and EDR (3 Mbps) when running SPP. These high Classic Bluetooth data rate provides high throughput, enabling applications which require higher throughput than what BLE can provide. Its raw data throughput running SPP can reach up to 1 Mbps.

This module also supports Bluetooth audio profiles including but not limited to A2DP, HFP, and AVRCP. An external audio codec can be flexibly connected via PCM interface to drive a speaker and a microphone. This module can also support iAP2 and HomeKit for MFi licensed developers.

The module comes with a set of AT commands via UART interface for setting up a bidirectional Bluetooth data link easily between an application MCU and mobile phones.

### 3. Specifications

#### 3.1 Absolute Maximum Ratings

Caution! The absolute maximum ratings in the following table indicates voltages levels where permanent physical damage to the device can occur, even if these limits were exceeded for only a brief duration.

| Parameter           | Specifications |      |       | Unit |
|---------------------|----------------|------|-------|------|
|                     | Min.           | Typ. | Max.  |      |
| 3P3VD               | -0.5           | 3    | 3.795 | V    |
| Ambient Temperature | -30            | 25   | +85   | °C   |
| Storage Temperature | -40            | -    | +105  | °C   |

## 3.2 RF Characteristics

### 3.2.1 Transmitter RF Parameters

| Parameter                                                     | Conditions | Min. | Typ. | Max. | Unit   |
|---------------------------------------------------------------|------------|------|------|------|--------|
| General                                                       |            |      |      |      |        |
| Frequency Range                                               | -          | 2402 | -    | 2480 | MHz    |
| Class1: GFSK TX Power                                         | -          | -    | 12   | -    | dBm    |

| 8-DPSK Peak DEVM                                              | -          | -    | -    | 25   | %      |
| 8-DPSK 99% DEVM                                               | -          | -    | -    | 20   | %      |
| In-Band Spurious Emissions                                    |            |      |      |      |        |
| 1.0 MHz <  M-N  < 1.5 MHz                                     | -          | -    | -    | -26  | dBm    |
| 1.5 MHz <  M-N  < 2.5 MHz                                     | -          | -    | -    | -20  | dBm    |
| M-N  ≥ 2.5 MHz                                                | -          | -    | -    | -40  | dBm    |
| Out-of-Band Spurious Emissions                                |            |      |      |      |        |
| 30 MHz ~ 1 GHz                                                | -          | -    | -    | -36  | dBm    |
| 1 GHz ~ 12.75 GHz                                             | -          | -    | -    | -30  | dBm    |
| 1.8 GHz ~ 1.9 GHz                                             | -          | -    | -    | -47  | dBm    |
| 5.15 GHz ~ 5.3 GHz                                            | -          | -    | -    | -47  | dBm    |
| GPS Band Noise Emissions (Without a front-end band filter)    |            |      |      |      |        |
| 1572.92 MHz ~ 1577.92 MHz                                     | -          | -    | -150 | -127 | dBm/Hz |
| Out-of-Band Noise Emissions (Without a front-end band filter) |            |      |      |      |        |
| 65 MHz ~ 108 MHz                                              | FM RX      | -    | -145 | -    | dBm/Hz |
| 746 MHz ~ 764 MHz                                             | CDMA       | -    | -145 | -    | dBm/Hz |

|                     |          |   |      |   |        |
|---------------------|----------|---|------|---|--------|
| 869 MHz ~ 960 MHz   | CDMA     | - | -145 | - | dBm/Hz |
| 925 MHz ~ 960 MHz   | EDGE/GSM | - | -145 | - | dBm/Hz |
| 1805 MHz ~ 1880 MHz | EDGE/GSM | - | -145 | - | dBm/Hz |
| 1930 MHz ~ 1990 MHz | PCS      | - | -145 | - | dBm/Hz |
| 2110 MHz ~ 2170 MHz | WCDMA    | - | -140 | - | dBm/Hz |

Note:

All specifications are for industrial temperature.

All specifications are single-ended. Unused input are left open,

+12 dBm output for GFSK measured with PA VDD = 2.5 V.

+9 dBm output for EDR measured with PA VDD = 2.5 V.

Maximum value is the value required for Bluetooth qualification.

Meets this spec using a front-end bandpass filter.

### 3.2.2 Receiver RF Parameters

| Parameter                           | Conditions                        | Min. | Typ.  | Max. | Unit |
|-------------------------------------|-----------------------------------|------|-------|------|------|
| General                             |                                   |      |       |      |      |
| Frequency Range                     | -                                 | 2402 | -     | 2480 | MHz  |
| RX Sensitivity                      | GFSK, 0.1% BER, 1 Mbps            | -    | -93.5 | -    | dBm  |
|                                     | $\pi/4$ -DQPSK, 0.01% BER, 2 Mbps | -    | -95.5 | -    | dBm  |

| 925 MHz ~ 960 MHz   | EDGE/GSM | - | -147 | -   | dBm/Hz |
| 1805 MHz ~ 1880 MHz | EDGE/GSM | - | -147 | -   | dBm/Hz |
| 1930 MHz ~ 1990 MHz | PCS      | - | -147 | -   | dBm/Hz |
| 2110 MHz ~ 2170 MHz | WCDMA    | - | -147 |     | dBm/Hz |

Note:

All specifications are single ended. Unused inputs are left open.

All specifications, except typical, are for industrial temperature.

Typical operating conditions are 3.3 V VBAT and 25 °C ambient temperature.

The receiver sensitivity is measured at BER of 0.1% on the device interface.

Typical GFSK CI numbers at -7 MHz, -5 MHz and -3 MHz are -45 dB, -42 dB and -41 dB, respectively.

Typical QPSK CI numbers at -7 MHz, -5 MHz and -3 MHz are -46 dB, -43 dB and -42 dB, respectively.

Typical 8PSK CI numbers at -7 MHz, -5 MHz and -3 MHz are -50 dB, -45 dB and -45 dB, respectively.

Meets this specification using front-end band pass filter.

Numbers are referred to the pin output with an external BPF filter.

F0=-64 dBm Bluetooth-modulated signal, f1=-39 dBm sine wave, f2=-39 dBm Bluetooth-modulated signal, f0=2f1-f2,

and  $|f2-f1|=n*1$  MHz, where n is 3, 4 or 5. For the typical case, n=4.

Includes baseband radiated emissions.

### 3.2.3 Antenna Requirements

The module has alternative internal PCB antenna (antenna gain: -2.3 dBi) and external antenna.

### 3.3 Power Consumption

Current consumption (under ambient temperature, the power supply is 3.0 V).

| Conditions                                                                     | Current (mA) |
|--------------------------------------------------------------------------------|--------------|
| Receive (1 Mbps) current level when receiving a basic rate packet (TBD mA).    | 12.5         |
| Transmit (1 Mbps) current level when transmitting a basic rate packet.         | 26.5         |
| Receive (EDR) current level when receiving 2 or 3 Mbps rate packet.            | 12.5         |
| Transmit (EDR) current level when receiving 2 or 3 Mbps rate packet.           | 20.0         |
| DM1/DH1 average current during a basic rate maximum throughput connection that | 14.5         |

|                                                                                                                                             |       |
|---------------------------------------------------------------------------------------------------------------------------------------------|-------|
| includes only this packet type.                                                                                                             |       |
| DM3/DH3 average current during a basic rate maximum throughput connection that includes only this packet type.                              | 17.0  |
| DM5/DH5 average current during a basic rate maximum throughput connection that includes only this packet type.                              | 17.5  |
| HV1 average current during an SCO voice connection consisting of only this packet type. The ACL channel is in 500 ms Sniff.                 | 14.0  |
| HV2 average current during an SCO voice connection consisting of only this packet type. The ACL channel is in 500 ms Sniff.                 | 9.0   |
| HV3 average current during an SCO voice connection consisting of only this packet type. The ACL channel is in 500 ms Sniff.                 | 7.0   |
| Sleep UART transport active. External LPO clock available (TBD $\mu$ A).                                                                    | 0.120 |
| Inquiry Scan (1.28 sec.). periodic scan rate is 1.28 sec.                                                                                   | 0.188 |
| Page Scan (R1) Periodic scan rate is R1 (1.28 sec.).                                                                                        | 0.188 |
| Inquiry Scan + Page Scan (R1)<br>Both inquiry and page scan are interlaced at a 1.28 seconds periodic scan rate.                            | 0.286 |
| Sniff master (500 ms) attempt and timeout parameters set to 4. Quality connection that rarely requires more than a minimum packet exchange. | 0.415 |
| Sniff slave (500 ms) attempt and timeout parameters set to 4. Quality connection that rarely requires more than a minimum packet exchange.  | 0.408 |
| Sniff (500 ms) + Inquiry or Page Scan (R1)                                                                                                  | 0.700 |
| Sniff (500 ms) + Inquiry Scan + Page Scan (R1)                                                                                              | 0.800 |

Note:

The values in this table were calculated for a 90% efficient DC-DC at 3V in HCI mode, and based on a Class 1 configuration bench-marked at Class2. Lower values are expected for a Class2 configuration using an external LPO and corresponding PA configuration.

## 4. Application, Implementation, and Layout

### 4.1 Application Block Diagram

Figure 3. Application Block Diagram

### 4.2 Typical Application Schematic Diagram

Figure 4. Typical Application Schematic Diagram of BB2706-32

Note: When using PUART, UART\_CTS signal must be pulled down to the ground.

### 4.3 Layout Guideline

1. The antenna needs to have enough clearance area.
2. The filter capacitor should be as close as possible to the module.
3. Do not place strong interference lines under the module.

## 5. Mechanical and Package

### 5.1 Module Size

Figure 5. Module Size of BB2706-32

## 5.2 Recommended PCB Footprint

Figure 6. Recommended PCB Footprint of BB2706-32

### Note:

1. The area of the product board under the module antenna needs to be clear of metal ground or traces.
2. The decoupling capacitor for 3P3VD input should be as close to the module as possible.
3. Strong interference line at the bottom of the module should be forbidden.

### 5.3 Packaging Information

Figure 7. Brief Packaging Process of BB2706-32 Modules

### 6. Thermal Reflow

Referred to IPC/JEDEC standard.

Peak temperature:  $<250^{\circ}\text{C}$

Number of times:  $\leq 2$

Figure 8. Recommended Reflow for Lead Free Solder

Note: The module is recommended not to go through reflow oven twice;

## 7. Ordering Information

| Part NO.  | Working Voltage | ANT     | Shielding Cover | Remark |
|-----------|-----------------|---------|-----------------|--------|
| BB2706-32 | 2.7V~3.V        | PCB ANT | Included        |        |
|           |                 |         |                 |        |

## 8. Revision History

| Version | Change Content                          | Reviser     | Date       |
|---------|-----------------------------------------|-------------|------------|
| V1.0    | Initial version                         | Renzhi Xing | 2018.01.06 |
| V1.1    | Update the version                      | Renzhi Xing | 2019.03.07 |
| V2.0    | Edited the English Version              | Renzhi Xing | 2019.06.10 |
| V2.1    | Modified the pin I/O type of the module | Renzhi Xing | 2020.05.18 |
| V2.2    | Verified Storage Temperature            | Renzhi Xing | 2020.06.09 |
|         |                                         |             |            |
